**Subject:** RE: OU-3 contamination - as discussed at last Thursday's conference call

Carol,

It was in the lower part per million range somewhere at the 400 to 500 foot depth. I will be in contact with them over the next few days and will request more specifics on this. Given that this is a State lead project under a DEC order on consent, this would be preferable.

Thanks,

Steve

Thank you Steve. Do you recall what concentrations Ed Hannon was talking about at the call, and at what depths? Or, would you rather that I ask him directly?

Thank you,

-Carol-

Carol,

I don't have the data report yet but expect that soon. Keep reminding me that you need this information.

Thanks,

Steve

**Subject:** OU-3 contamination - as discussed at last Thursday's conference call

Hi Steve - At last Thursday's conference call, Northrop-Grumman had mentioned that higher than expected concentrations of contamination had been found at the western well of the northernmost transect. Just wondering if you might have a map showing where this contamination was found? Also, it was difficult to hear some of the discussion regarding concentrations and depths. Do you have information on the concentrations and depths of contaminants? Was it mostly TCE?

Thanks,

-Carol-
